

## REO LEADS WORLD IN TRUCK MANUFACTURE

Official Figures of First Quarter of 1919 Show That the Reo Has Made Most Trucks

### TO INCREASE PRODUCTION

Plans Made to Build More Passenger and Motor Trucks Than at Any Time in Previous Years

According to a statement just made public by M. H. Beatty, president and general manager of the Reo Motor Car Company, the Reo has made more trucks in the first quarter of 1919 than in any previous quarter. The statement is based upon the official figures for the first quarter of 1919, which show a surplus of trucks and a surplus of passenger cars. The statement also indicates that the Reo Motor Car Company is planning an increased production both of passenger cars and trucks for the rest of the year. The text of the statement follows:

"Based on the official figures for the first quarter ending March 31, 1919, of the passenger car, Reo Motor Car Company, is producing more trucks for commercial uses than any other truck manufacturer in the United States, with the possible exception of Ford, whose figures are not available. I make this statement with the full knowledge of the statements in the advertising of other manufacturers, that they are the largest truck producers. Official figures furnish the indisputable answer. This achievement represents an increase in the production of a principle. When we first presented a truck whose outstanding attributes were pneumatic tires, speed and complete electrical equipment, the judgment of Mr. Thomas, our chief engineer, was freely questioned by buyers and competitors alike. Within the past year the character of our principle has been completely established by countless imitations, and today the principle has been even more eloquently acclaimed by the ultimate judge—the truck user himself. The production figures for the first quarter of the year clearly prove. We manufacture but a single model, but with that one model we are building more trucks than any other manu-

## King 8, Handled by the Standard Motor Company

The "Foursome" sport model. This style is a dash of the new famous designer lines of this handsome model have attracted manufacturer and public alike. It is a sport car with long, low, rakish lines, yet retaining perfect balance.

facturer, whether he have one or a dozen models. With all that, it must not be supposed that we intend to abandon the passenger car field. We are confident and our feeling of what was due from us in our country in war time, our belief in passenger car production for the past 12 months. That belief, which was temporary. We purpose to build more passenger automobiles in the 12 months beginning August 1, 1919, than in any similar period in the history of this company.

Attachments have been patented that permit the use of anti-skid chains on automobiles using disk wheels.

### OIL OF HIGH QUALITY IS FOUND IN ENGLAND

LONDON, Wednesday, May 29.—For the first time in the history of the world, a high quality oil of high quality and in considerable quantities has been discovered in England. The discovery was made in the north of the country, in the county of Lancashire, in the town of Skipton. The oil was found in a deep well, which was drilled to a depth of 1,000 feet. The oil is of a high quality, and is expected to be of great value to the oil industry.

which is about at 100 feet. It is described by American drillers as a heavy oil shale. The surface of the oil bearing sand has only been worked a few feet, and it is hoped that deeper drilling will increase the flow. The test has shown it to be of a high quality. The new telephone directory goes in press later. For advertising space and changes in listing call Manager (telephone 113) Southwest, or 104 Telephone company. Adv. A plan to teach the art of self-defense and aggression is planned for youths by the Peruvian government.

## for ROAD MASTERY

WHY the eight cylinder motor gives the quickest acceleration, practically eliminates gear-shifting, takes all but the steepest hills on "high," banishes vibration, develops great power and speed at small fuel expense, and adds years to the car's life, is explained in the words—CONSTANT POWER.

The Eight has four power impulses per revolution; the Six three; and the Four, two. An Eight's power strokes overlap at the point of their highest efficiency.

No gaps between strokes to be bridged by the momentum of a heavy, power-wasting fly-wheel; no high and low power periods to cause vibration and wear, but a constant, swift flowing stream of energy, composed of strokes received at right

angles, instead of vertically, giving a smoothness of power that relieves mechanism and tires of the "killing" effects of violent power strokes. In accessibility the King's motor surpasses all other engine types.

The King is the original medium-priced Eight and has been in operation the world over for nearly four years. A King demonstration is a most necessary part of your "before buying" experience.
